About Me

I am a Data Analyst with a Sociology background, and through RevoU's Full Stack Data Analytics program I built end-to-end skills across SQL, Python, and Tableau covering everything from data cleaning to dashboard development. That background gives me a structural lens for reading behavioral patterns in data, helping me go beyond surface metrics to uncover the human factors behind the numbers. In my recent marketing analytics project, I segmented 3,397 B2B SaaS leads using clustering analysis to identify high-value customer profiles, quantified marketing ROI across five acquisition sources, and proposed a budget reallocation strategy that projected +Rp384.9M in additional revenue without increasing total spend. My experience in live event sales further sharpened my attention to data accuracy under pressure, and I am now looking to bring both analytical rigor and human insight into a data analyst or HR analyst role.

Working Experiences

Ticketing and Sales Operations Staff

Nov 2024 - Jan 2026

Liga 4 Regional Football Competition – Persiboba Home Matches

- Reconciled ticket sales across economy and VIP categories per match day, handling revenue in the range of Rp5–10 million per event, ensuring accuracy between recorded transactions, cash inflow, and inventory.
- Validated daily ticket and merchandise revenue using Excel, maintaining consistent alignment across transaction records and cash reports in a fast-paced live event environment.
- Prepared and delivered structured post-match sales recaps to supervising coordinators, covering ticket volume, merchandise sales, and revenue breakdown across multiple high-pressure live event days.

Project Experiences

PeopleU SaaS Lead Clustering Analysis

RevoU NEXT Data Insight Project

April 2026 - April 2026

This project is part of RevoU Data Insight Project, a 4-week case study designed to analyze customized datasets and address business challenges. Supervised by RevoU, this project hones analytical skills, strengthens problem-solving abilities, and guides students in delivering actionable insights.

- Analyzed 3,397 B2B SaaS leads using KMeans clustering (K=3) to segment marketing effectiveness, identifying three distinct lead profiles: High-Value Enterprise (29.9% CVR, avg GMV Rp11.2M), High-Converting SMB (60.7% CVR, avg GMV Rp3.5M), and Unqualified Leads (0% CVR)
- Quantified marketing channel ROI across five acquisition sources (Referral, CPC, Direct, Organic Search, Organic Social), revealing CPC as the highest-performing channel (ROI ratio 6.93) and Organic Social as the weakest investment (ROI ratio 3.20), directly informing budget reallocation strategy
- Developed funnel timing analysis identifying a critical conversion threshold: leads inactive beyond 14 days showed 0% conversion, while leads active past 30 days converted at 97.9%, enabling targeted sales prioritization and resource optimization
- Proposed budget reallocation scenario projecting +Rp384.9M additional GMV (18.8% increase over 2022 baseline) by reallocating Organic Social budget to CPC without increasing total marketing spend

Airline Passenger Satisfaction Analysis

RevoU Full Stack Data Analytics Program

Oct 2025 - Feb 2026

- Analyzed 129,487 passenger records using Python and SQL to evaluate satisfaction drivers across 4 dimensions: Digital Experience, Physical Comfort, Service Quality, and Operational Reliability
- Quantified per-driver satisfaction gap scores, identifying Digital Experience as the top-ranked gap (0.92), followed by Physical Comfort (0.78) and Service Quality (0.67), with only 43.4% of passengers currently satisfied
- Analyzed satisfaction patterns across passenger segments including travel class, customer type, and travel purpose, revealing that economy and personal travelers faced the most severe experience gaps and represented the highest at-risk population, which informed the prioritization framework for targeted improvement recommendations.
- Built interactive Tableau dashboards to present driver performance findings to stakeholders, translating complex gap analysis into actionable visual insights

Education

Universitas Negeri Malang
Bachelor of Education in Sociology
Focus on social research methodology, qualitative & quantitative analysis, and structured academic writing.

Aug 2018 - Jun 2025

RevoU
Full-stack Data Analytics
Completed end-to-end data analytics training including SQL querying, Python data analysis, exploratory data analysis, data visualization (Tableau), and business case simulation projects.

Oct 2025 - Feb 2026

Additional Information

- Technical Skills :
- SQL (Joins, Aggregation, Subqueries, BigQuery) | Python (Pandas, Data Cleaning, EDA, KMeans Clustering, Scikit-learn) | Tableau (Interactive Dashboard Development) | Microsoft Excel (Data Validation, Revenue Reconciliation)
- Soft Skills
- Analytical Thinking | Structured Problem Solving | Data Accuracy & Validation | Cross-functional Coordination | Business Insight Translation

Certification: 1. Full Stack Data Analytics, RevoU

Mar 2026
