About Me

I am a Data Analytics graduate with a Sociology background, passionate about translating structured data into clear business insights. Through hands-on training at RevoU, I built end-to-end analytical skills spanning SQL, Python, and Tableau, from data cleaning to dashboard development. My Sociology background gives me a structural lens for interpreting behavioral patterns in data, helping me move beyond surface metrics to understand the human factors driving the numbers. As part of the program, I completed a capstone project analyzing 129,487 passenger records to identify drivers and prioritize improvements across four service dimensions: Digital Experience, Physical Comfort, Service Quality, and Operational Reliability. My operational experience in live event sales further reinforced my attention to data accuracy and ability to perform under pressure, and I am now looking to bring both analytical rigor and human insight into a data analyst role.

Working Experiences

Ticketing and Sales Operations Staff

Nov 2024 – Jan 2026

Liga 4 Regional Football Competition – Persiboba Home Matches

- Reconciled ticket sales across economy and VIP categories per match day, handling revenue in the range of Rp5–10 million per event, ensuring accuracy between recorded transactions, cash inflow, and inventory.
- Validated daily ticket and merchandise revenue using Excel, maintaining consistent alignment across transaction records and cash reports in a fast-paced live event environment.
- Prepared and delivered structured post-match sales recaps to supervising coordinators, covering ticket volume, merchandise sales, and revenue breakdown across multiple high-pressure live event days.

Project Experiences

Airline Passenger Satisfaction Analysis

RevoU Full Stack Data Analytics Program

Oct 2025 – Feb 2026

- Analyzed 129,487 passenger records using Python and SQL to evaluate satisfaction drivers across 4 dimensions: Digital Experience, Physical Comfort, Service Quality, and Operational Reliability
- Quantified per-driver satisfaction gap scores, identifying Digital Experience as the top-ranked gap (0.92), followed by Physical Comfort (0.78) and Service Quality (0.67), with only 43.4% of passengers currently satisfied
- Analyzed satisfaction patterns across passenger segments including travel class, customer type, and travel purpose, revealing that economy and personal travelers faced the most severe experience gaps and represented the highest at-risk population, which informed the prioritization framework for targeted improvement recommendations.
- Built interactive Tableau dashboards to present driver performance findings to stakeholders, translating complex gap analysis into actionable visual insights

Education

Universitas Negeri Malang

Aug 2018 – Jun 2025

Bachelor of Education in Sociology

Focus on social research methodology, qualitative & quantitative analysis, and structured academic writing.

RevoU

Oct 2025 – Feb 2026

Full-stack Data Analytics

Completed end-to-end data analytics training including SQL querying, Python data analysis, exploratory data analysis, data visualization (Tableau), and business case simulation projects.

Additional Information

Technical Skills :

- SQL (Joins, Aggregation, Subqueries) | Python (Pandas, Data Cleaning, EDA) | Tableau (Interactive Dashboard Development) | Microsoft Excel (Data Validation, Revenue Reconciliation)

Soft Skills

- Analytical Thinking | Structured Problem Solving | Data Accuracy & Validation | Cross-functional Coordination | Business Insight Translation

Certification: 1. Full Stack Data Analytics, RevoU

Mar 2026
